1. The following is an examiner's statement of reasons for allowance:

The invention is directed to sorting articles to be printed.

Claim 1 identifies the uniquely distinct features of "sorting the orders according to the number of articles to be printed in each order to produced a sorted arrangement of the orders; and for each successive order in the sorted arrangement of orders, placing the order in a column which currently has a lowest number of total articles to be printed."

Claims 4, 7, 8, 9 identify the uniquely distinct features of "exchanging the Ith and Jth groups between the Mth and Nth column if the following boolean expression is true:

$(L(M) > L(N) \text{ AND } L(I,M) > L(J,N) \text{ AND } L(M) - L(N) > L(I,M) - L(J,N)) \text{ OR}$

$(L(M) < L(N) \text{ AND } L(I,M) < L(J,N) \text{ AND } L(N) - L(M) > L(J,N) - L(I,M))$.

where $L(M)$ is the number of articles to be printed in the Mth column,

$L(N)$ is the number of articles to be printed in the Nth column,

$L(I,M)$ is the number of articles to be printed in the Ith order of the Mth column,

and $L(J,N)$ is the number of articles to be printed in the Jth order of the Nth

column."

The closest prior art Leinhos (US 5,721,813) teaches a conventional method of sorting articles to be printed; either singularly or in combination with other cited reference fails to anticipate or render the above underlined limitations obvious (when used with other claimed limitations).
